## 3 Levels Project

### 1. Root Elements

#### 1. ManageLevels Operator

Declared as `public node`

#### 1. Comments and Information

##### **ManageLevels Comments:**

This function is in charge to compute at each cycle, the Level to apply according data received from trackside, driver and train position.

"5.10 Level Transitions"

"5.10.1 General requirements"

"5.10.1.1 Every level transition border to levels 2, 3, or NTC shall be announced to the

ERTMS/ETCS on-board equipment via balise group or via the RBC."

This is an input of the node "Data\_from\_track\_to\_Level" provided at each cycle.

"5.10.1.2 A level transition announcement to the ERTMS/ETCS on-board equipment shall

consist of an order to execute the level transition at a further location corresponding to the border."

See definition of the type "T\_Level\_Transition".

"5.10.1.3 When the ERTMS/ETCS on-board equipment receives a level transition announcement, and if this announcement will result in a change of the on-board level,

it shall immediately inform the driver about the announced level transition."

Computation of the output "announced\_level".

"5.10.1.4 At the level transition border a balise group shall be placed with an immediate level

transition order or a conditional level transition order."

Trackside requirement.

"5.10.1.7 As soon as the announcement of the level transition has been received, some data

(mainly movement authority and track description data) from the transmission media of

the new level shall be accepted, but shall not be used until the level transition is effective."

Output "announced\_level" produced, then selection of data is out of the scope of this function.

"5.10.1.8 When the onboard has performed the level transition, further data (mainly movement

authority and track description data) received from the transmission media of the level

being left shall be rejected.”

Output “announced\_level” produced, then selection of data is out of the scope of this function.

“5.10.2.5 When the onboard has selected the level it will switch to, it shall carry out the level

transition as if it has received a level transition order to this level only i.e. it shall ignore

the requirements related to transitions to the other levels.”

Core of this function and computation of output “announced\_level”.

“5.10.2.6 The ERTMS/ETCS on-board equipment shall inform the driver about the selected level

transition only.”

Computation of the output “announced\_level”.

“5.10.2.8 The ERTMS/ETCS on-board equipment shall store the table of priority of trackside

supported ERTMS/ETCS levels.”

Storage and memorisation is out of the scope of this function.

“5.10.3.14.4 In the same way as for a level transition order, the ERTMS/ETCS on-board equipment

shall store the table of ERTMS/ETCS levels supported by trackside.”

Storage and memorisation is out of the scope of this function.

Requirement of §5.10 out of the scope of this function (trackside or other functions) :

-----  
-----

5.10.2.1, 5.10.2.2, 5.10.2.3

5.10.3.1.2, 5.10.3.1.3, 5.10.3.1.4, 5.10.3.1.6

5.10.3.2.2, 5.10.3.2.4, 5.10.3.2.6,

5.10.3.3.1,

5.10.3.3.2,

5.10.3.4.2, 5.10.3.5.1, 5.10.3.5.2, 5.10.3.6.15.10.3.6.4, 5.10.3.7.2

5.10.3.7.4, 5.10.3.7.6, 5.10.3.8.2, 5.10.3.9.1, 5.10.3.10.1

5.10.3.12.2, 5.10.3.13.3

## 2. Interface

**Table 1: Inputs of ManageLevels**

Name	Type	Comments and Information
trainStandstill	bool	
driverLevelTransition	Level_And_Mode_Type s_Pkg::T_LevelTransiti on	

levelAck	bool	
trainPosition	TrainPosition_Types_Pkg::trainPosition_T

### 1. View of diagram\_ManageLevels\_1 (ManageLevels)

Figure 1: View of diagram\_ManageLevels\_1 (ManageLevels)

## 2. Acknowledgement Package

### 1. IsAckNeeded Operator

Declared as `public function`

#### 1. Comments and Information

##### IsAckNeeded Comments:

5.10.4.4 For the following transitions marked as "YES", the level transition announcement shall

define the location from where an acknowledgement is required:

Coming from	Acknowledgement when entering				
	L 0	L 1	L 2	L 3	L NTC
L 0	-	No	No	No	Yes
L 1	Yes	-	No	No	Yes
L 2	Yes	No	-	No	Yes
L 3	Yes	No	No	-	Yes
L NTC	Yes	Yes	Yes	Yes	Yes

#### 2. Interface

**Figure 2: View of diagram\_IsAckNeeded\_1 (IsAckNeeded)**

## 2. ManageAck Operator

Declared as `public node`

### 1. Comments and Information

#### ManageAck Comments:

5.10.4 Acknowledgement of the level transition

5.10.4.1.1 Exception: An ERTMS/ETCS on-board equipment in NL mode shall not require an acknowledgement from the driver.

### 2. Interface

**Table 7: Inputs of ManageAck**

Name	Type	Comments and Information
selected_level_transition	Level_And_Mode_Types_Pkg::T_LevelTransition	
trainPosition	TrainPosition_Types_Pkg::trainPosition_T	
last_level	M_LEVEL	
levelAck	bool	
IsNewLevel	bool

**Figure 4: View of diagram\_Position\_In\_Ack\_Area\_1 (Position\_In\_Ack\_Area)**

## 4. RequestAck Operator

Declared as `public node`

### 1. Comments and Information

#### RequestAck Comments:

5.10.4.1 If defined so for the level transition (see table below), the driver shall be requested to

acknowledge the transition

a) when the max safe front end of the train has passed a trackside defined location in

rear of the level transition border

b) upon receipt of the order to switch to the new level immediately

5.10.4.2 If the driver has not yet acknowledged within the driver acknowledgement time (refer to

Appendix A3.1) after the level transition, a service brake command shall be initiated.

5.10.4.3 The driver shall then acknowledge the level transition in order to release the service brake command.

### 2. Interface

**Table 11: Inputs of RequestAck**

Name	Type	Comments and Information
isAckNeeded	bool	
selected_level_transition	Level_And_Mode_Type s_Pkg::T_LevelTransition	
trainPosition	TrainPosition_Types_Pkg::trainPosition_T	
levelAck	bool	
IsNewLevel	bool

### 3. LevelChangement Package

#### 1. ComputeNewLevel Operator

Declared as `public function`

##### 1. Comments and Information

##### ComputeNewLevel Comments:

5.10.1.5 If the message from the border balise group is not received, the level transition shall still be executed when the estimated front end passes the location given in the announcement.

##### 2. Interface

Table 17: Inputs of ComputeNewLevel

**Figure 7: View of diagram\_ProceedOnLevelChange\_1 (ProceedOnLevelChange)**

### 3. TripRequests Operator

Declared as **public function**

#### 1. Comments and Information

##### **TripRequests Comments:**

5.10.3.2 Transition from Level 0 (Unfitted) to Level 2/3 area

5.10.3.2.3 A level 2/3 MA and track description information shall be received from the RBC before the level transition border. If not, the train shall be tripped at passage of the border, i.e.

after switching to level 2 or 3, movement is not allowed without a movement authority

(refer to SRS chapter 4, transitions between modes).

5.10.3.4 Transition from Level 0 (Unfitted) to Level 1 area

5.10.3.4.1 A level 1 MA and track description information shall be received before or at the level

transition border. If not, when the level transition is performed, the train shall be tripped, i.e. after switching to level 1, movement is not allowed without a movement

authority (refer to SRS chapter 4, transitions between modes).

5.10.3.7 Transition from Level NTC to Level 2/3 area

5.10.3.7.3 A level 2/3 MA and track description information shall be received from the RBC before the level transition border. If not, the train shall be tripped at passage of the border, i.e.

after switching to level 2 or 3, movement is not allowed without a movement authority

(refer to SRS chapter 4, transitions between modes).

5.10.3.8 Transition from Level NTC to Level 1 area

5.10.3.8.1 A level 1 MA and track description information shall be received before or at the level

transition border. If not, when the level transition is performed, the train shall be tripped, i.e. after switching to level 1, movement is not allowed without a movement

authority (refer to SRS chapter 4, transitions between modes).

## 4. LevelTransitionSelection Package

### 1. IsInPriorityTable Operator

Declared as `public function`

#### 1. Comments and Information

##### **IsInPriorityTable Comments:**

"5.10.3.14.1 When the ERTMS/ETCS on-board equipment accepts a conditional level transition

order the onboard shall check whether the current level is contained in the priority list

of the conditional level transition order."

Core of the function

#### 2. Interface

## 2. IsSelectedTransition Operator

Declared as **public function**

### 1. Comments and Information

#### **IsSelectedTransition Comments:**

"5.10.2.4.1 The on-board equipment shall consider an ERTMS/ETCS level as "Available for use"

as follows:

a) Level 2 or 3: the level is configured on-board and at least one Mobile Terminal is

available on-board, i.e. the ETCS onboard has detected at least one Mobile Terminal in working condition, independently whether it is registered to a network or not.

b) Level NTC: the concerned National System is available on-board (if an STM is used, refer to SUBSET-035 for further details).

c) Level 0 or 1: always."

To compute stop condition.

### 2. Interface

#### 4. SelectDriverCondition Operator

Declared as **public function**

##### 1. Comments and Information

###### **SelectDriverCondition Comments:**

"5.10.3.15 Transition initiated by driver

5.10.3.15.1 In addition to the level transitions ordered by trackside, it is also possible, at standstill,

for the driver to change the ERTMS/ETCS level (refer to section 3.18.4.2).

"

If the train is at standstill

and if a driver transition is received

with a level different from the current level

the received transition from the driver is selected, otherwise the last one is kept.

There are no check of capabilities in this case, if the request is not correct TRIP mode shall be triggered latter (see condition to Trip Mode)

##### 2. Interface

## 5. SelectLevelTransition Operator

Declared as **public node**

### 1. Comments and Information

#### SelectLevelTransition Comments:

Operator in charge of the selection of the last received level transition.

"5.10.1.6 The on-board equipment shall manage only one level transition order at a time.

Therefore a new level transition order shall replace a previously received order, i.e. if a

new order to switch to a different level or to the same level but at a different location is

received, before the action from the first order has been performed, only the last order

shall be executed."

Selection of one transition.

"5.10.1.6.1 In Shunting and Passive Shunting modes only one set of Level Transition Information

shall be stored at a time. Therefore a set of Level Transition Information received shall

replace any Level Transition Information already stored on-board."

No specific implementation.

### 2. Interface

IfBlock1:else:else:else	

## 6. SelectNormalTransition Operator

Declared as **public function**

### 1. Comments and Information

#### **SelectNormalTransition Comments:**

"5.10.2.4 When receiving the information about all ERTMS/ETCS levels that are supported by trackside, the ERTMS/ETCS on-board equipment shall select from the table the level

with the highest priority, which is available for use by the onboard equipment." Loop on the table of transition until one available for use is found.

"5.10.2.4.1 The on-board equipment shall consider an ERTMS/ETCS level as "Available for use"

as follows:

a) Level 2 or 3: the level is configured on-board and at least one Mobile Terminal is

available on-board, i.e. the ETCS onboard has detected at least one Mobile Terminal in working condition, independently whether it is registered to a network or not.

b) Level NTC: the concerned National System is available on-board (if an STM is used, refer to SUBSET-035 for further details).

c) Level 0 or 1: always."

To compute the stop condition of the loop.

"5.10.2.7 If none of the ordered level(s) is available for use by the ERTMS/ETCS on-board

equipment, it shall nevertheless make the transition, to the ordered level with the

lowest priority."

Lowest priority transition selected until one available for use is found.

## 2. Interface

#### 2. EntryInLevel2or3 Operator

Declared as **public function**

## 1. Comments and Information

### EntryInLevel2or3 Comments:

5.10.3.1 Transition from Level 1 to Level 2/3 area

5.10.3.1.5 When the ERTMS/ETCS on-board equipment has switched to the new level, it shall

report the new on-board level, including a position report.

5.10.3.2 Transition from Level 0 (Unfitted) to Level 2/3 area

5.10.3.2.5 When the ERTMS/ETCS on-board equipment has switched to the new level, it shall

report the new on-board level, including a position report.

5.10.3.7 Transition from Level NTC to Level 2/3 area

5.10.3.7.5 When the level transition location is passed with the estimated front end a position

report shall be sent to the RBC. In case the ERTMS/ETCS on-board equipment is interfaced to the National System through an STM, please refer to SUBSET-035 for

the STM state transition order.

The switch of level occurred when the estimated front-end pass the border.

**Figure 16: View of diagram\_EntryInLevel2or3\_1 (EntryInLevel2or3)**

### 3. ExitLevel2or3 Operator

Declared as `public node`

#### 1. Comments and Information

##### **ExitLevel2or3 Comments:**

5.10.3.3 Transition from Level 2/3 to Level 1 area

5.10.3.3.3 When the train has passed the level transition border with its min safe rear end, i.e.

when the whole train has left the level 2/3 area, the onboard equipment of the leading

engine shall send a position report to the RBC.

5.10.3.3.4 After receiving this exit position report, the RBC can order the train to terminate the

session (leading and non-leading engines).

5.10.3.6 Transition from Level 2/3 to Level 0 (Unfitted) area

5.10.3.6.2 When the train has passed the level transition border with its min safe rear end, i.e.

when the whole train has left the level 2/3 area, the onboard equipment of the leading

engine shall send a position report to the RBC.

5.10.3.6.3 After receiving this exit position report, the RBC can order the train to terminate the

session (leading and non-leading engines).

5.10.3.10 Transition from Level 2/3 to Level NTC area

5.10.3.10.3 When the train has passed the level transition border with its min safe rear end, i.e.

when the whole train has left the level 2/3 area, the onboard equipment of the leading

engine shall send a position report to the RBC.

5.10.3.10.4 After receiving this exit position report, the RBC can order the train to terminate the

session (leading and non-leading engines).

5.10.3.15 Transition initiated by driver

5.10.3.15.3 If the driver changes the level from 2 or 3 to any other, the ERTMS/ETCS on-board

equipment shall report the new level to the RBC if a communication session is established. When receiving the level change report, the RBC shall order the communication session to be terminated.
